## BRADYKININ B<sub>1</sub> RECEPTOR ANTAGONISTS

## Abstract of the Invention

Bradykinin B<sub>1</sub>-receptor antagonists of formula

$$A = \begin{pmatrix} R^1 & R^2 & R^3 \\ (CH_2)_m & (CH_2)_n & X \end{pmatrix}$$

are disclosed. The compounds are useful for treating diseases associated with inappropriate bradykinin receptor activity, such as diabetic vasculopathy, inflammation, pain, hyperalgesia, asthma, rhinitis, septic shock, atherosclerosis and multiple sclerosis. Pyrimidines, triazines, and anilines in which Q is imidazolyl or pyrrolyl are particularly preferred.
